Hardin Co., Ltd

BUSINESS PLAN

WASTE MANAGEMENT by USING URBAN RIG TECHNOLOGY

Business Potential

The world generate 2 billion tonnes of municipal solid waste annually, and this is going to increase 3.4 billion tons by 2050.

Most of the waste are dump in the landfills, creating vast, toxic mountains that pollute the air, contaminate the water, endanger public health and hasten climate change.

The proliferation of plastic waste such as discarded bottles, packaging bags, containers of all sorts – is responsible for the majority of the debris found in rivers and oceans, causing serious risks to marine life and coastal livelihoods.

Business Potential

In South Korea, there is a rising trend in domestic plastic waste disposal, projected to reach 40,000 tons per day by 2030. The government is encouraging the industry to use pyrolysis technology to convert the plastic waste into fuel, in a circular economy, without harming the environment.

Hardin Co., Ltd, has decided to adopt Urban Rig pyrolysis technology and had issued the Letter of Intent to purchase 2 x 100 tonnes of Urban Rig machine at USD 60,000,000. Hardin Co., Ltd also express interest to convert the intended purchase to a 10-years lease contract instead if possible.

There are business opportunity of 400 units of 100T machines sales potential (USD 12 billions) or leasing opportunity in South Korea alone by 2030.

The Proposal

- Hardin would purchase 2x 100T daily capacity waste processing pyrolysis machine from Petercorp to turn the plastic waste into new sustainable fuel
- Hardin is currently the operator of the licensed waste collector of the plastic and mixed waste in Korea with a capacity of up to 200T of plastic waste per day. Currently the waste product is shredded, screening and crushed before they are shipped for further recycling usage.
- In order to further integrate the downstream business, Hardin intended to purchase 2 x100T Urban Rig machine to turn the products from the existing process to turn them into liquid fuel and solid fuel.
- Hardin is seeking to finance this environmentally friendly and lucrative waste management business by methods of
  - Equity financing
  - Financial loan

The Appendix

The URBAN RIG Technology

URBAN RIG - Highlights

- Instead of normal incineration, this equipment pyrolyze waste in anoxic condition, therefore, no harmful substances such as CO2 or Dioxin is produced as a result

- It convert the unsorted waste into sellable products such as oil, charcoal and inorganic matter such as metals

  - Oil are kerosene, light oil, heavy oil and asphaltene

  - Charcoal is usable for briquettes, nano carbon, activated carbon and diamond raw materials

  - Inorganic matters are copper, aluminum, lead, glass and salt. Other non sellable inorganic waste are reduced to bare minimum volume such as sands and stones which could be used for the building construction materials or for minimum landfills.

- As Urban Rig could process the garbage without generating CO2, the operator could also earn Carbon Credit in lieu of processing the garbage from a normal incinerator

Secure high profitability with waste volume reduction. !

— Superheated Steam Decomposition Fuel Recovery Unit —

URBAN RIG

URBAN RIG makes inside the rector high temperature and oxygen free by superheated steam and recover the fuel oil from the resin-based mixed waste c/w food residue and mud.

The recovered fuel oil can be used as a fuel for natural renewable energy, and also a boiler fuel of the URBAN RIG and a superheated steam generator.

It is a waste treatment facility with high-level environmental and economic efficiency.

Image : URC-400 / Continuous type 40ton

No sorting required, Batch input processing.

URBAN RIG does not require to sort waste for processing and able to vaporize and carbonize the waste by superheated super-fine particles steam. Furthermore, metals can be extracted in a non-oxidizing state.

Solve the secondary pollution issue with waste cleaning.

Waste plastic may contain mud and residue and non-resin materials of metals, and agricultural plastic waste may contain pesticides. This machine does not require clean such contamination and able to input after one-day storage to remove moisture.

Able to handle mixed PVC and mixed resin

It is difficult to pelletize multicomponent materials such as crimped film and polyvinyl chloride resins. This facility is also able to extract high-quality oxygen-free recycled oil from PVC waste as well.

Able to operate with recycled oil

This facility uses gasified extracted oil as fuel for the boiler and superheater. It is not necessary for fuel for operation except initial startup. It is expected highly profitable as only labor and electricity cost is the main operational costs.

Pollution-free emission function

The exhaust gas purification system performs high-level cleaning of the exhaust gas from steam boiler, superheaters, and temperature control heaters of decomposition furnaces. A portion of the purified water purified by the system will be recycled and used by the steam boiler.

200 ton 7 Continuous Process

URC-2000

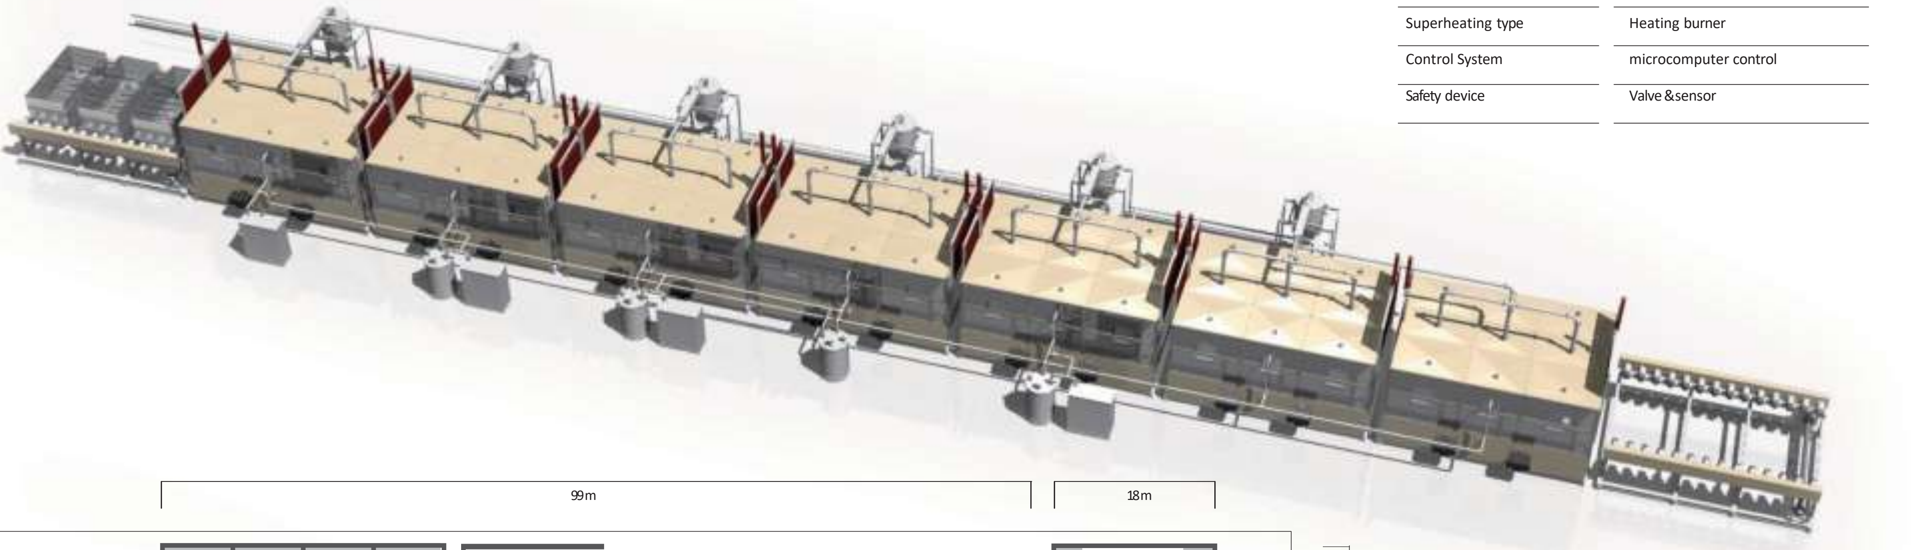
GENERAL PLASTICS METAL ORGANICS

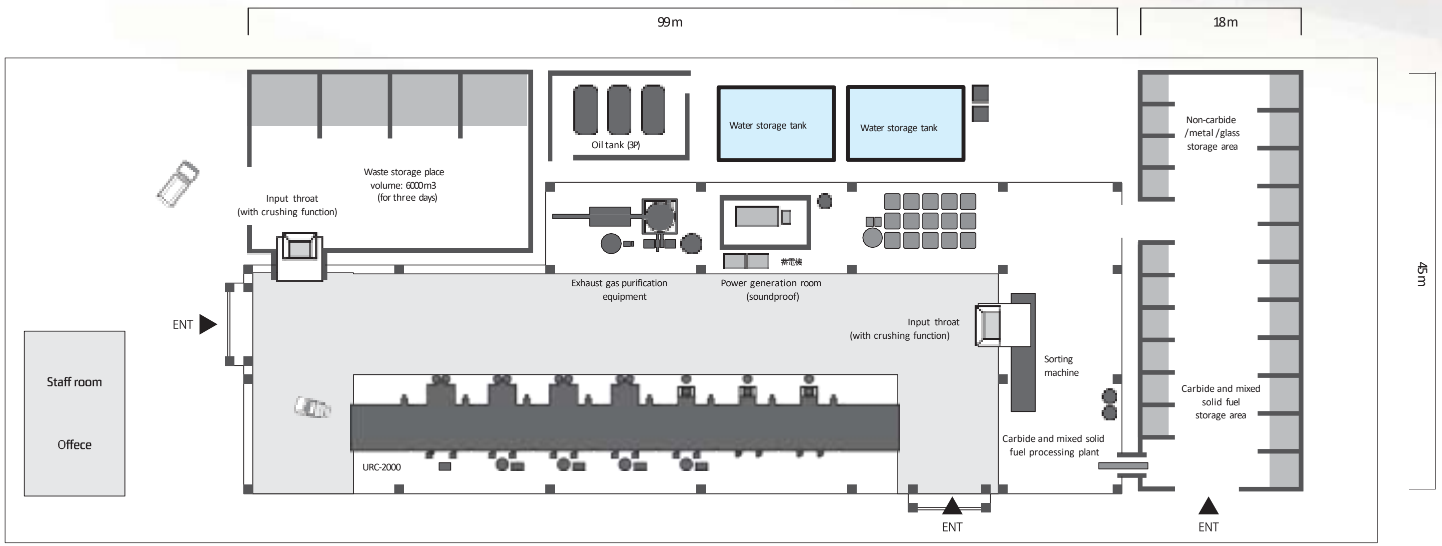
URC-2000 for General waste, volume reduction, and liquefied resource recovery

URC-2000 is designed for carbonizing waste with high moisture content such as food residue, waste with sludge and soil, etc., which is represented by general household waste. Input to the process, 3 buckets as 1 batch and automatically operated by microcomputer from the loading slot through 7 processes such as drying, heating, carbonization extraction, and cooling to the unloading slot.

■ SPEC

Product model name	URC-2000
Throughput / day	200 ton / day
Decomposition temperature	MAX 600°normal, 0.2MPa under Size
(Processing Unit)	W:66m D:7m H:7m Size
(bucket)	W:1.5m D:3m H:1m / 4.5m³
Process System	Continuous type
Steam Generation	Steam boiler
Superheating type	Heating burner
Control System	microcomputer control
Safety device	Valve & sensor





Building area	4,650 m²
Processing plant	3,000 m²
Waste storage	640 m²
Reclaimed storage area	810 m²
Office warehouse	200 m²
Main building structure	HR-construct
Firewall structure	R-construct
Ceiling height	10m
Oil storage tank	5t × 8
Water storage tank	5t × 2

Fuel Recovery Mechanism

Fuel Recovery Mechanism is s follows:

1. Inject high-temperature oxygen-free steam(further superheated) at 600° C into the cracking furnace.
2. Distillate and vaporize oil component by high-temperature H_2O gas.
3. The vaporized gas is treated with chlorine catalyst and liquefied by a cooling condenser.
4. Segregate gas-oil and heavy-oil by the temperature difference of vaporized gas through a solenoid valve.
5. Water is separated in an oil/water separation tank, remove impurities in a filtration tank, and recover recycled oil.

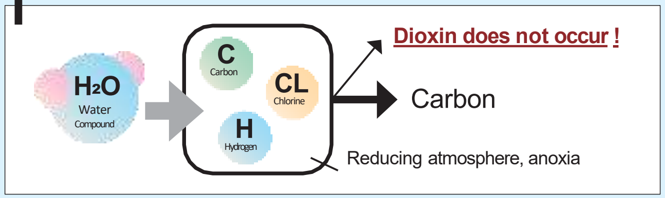
Superheated steam potential

■ Dioxin & carbon dioxide free

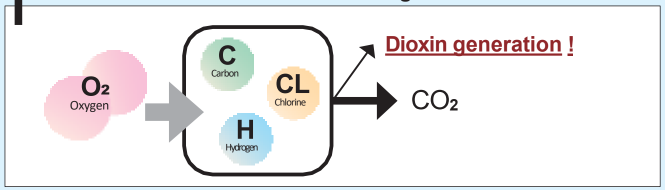
The inside of the reactor is anoxic, and no oxygen reaction occurs.

Therefore, Dioxin and CO_2 are not generated.

Superheated steam carbonization furnace

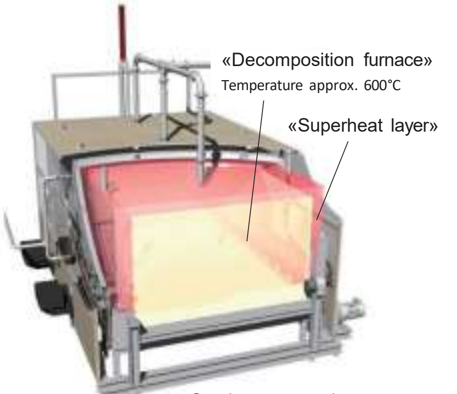


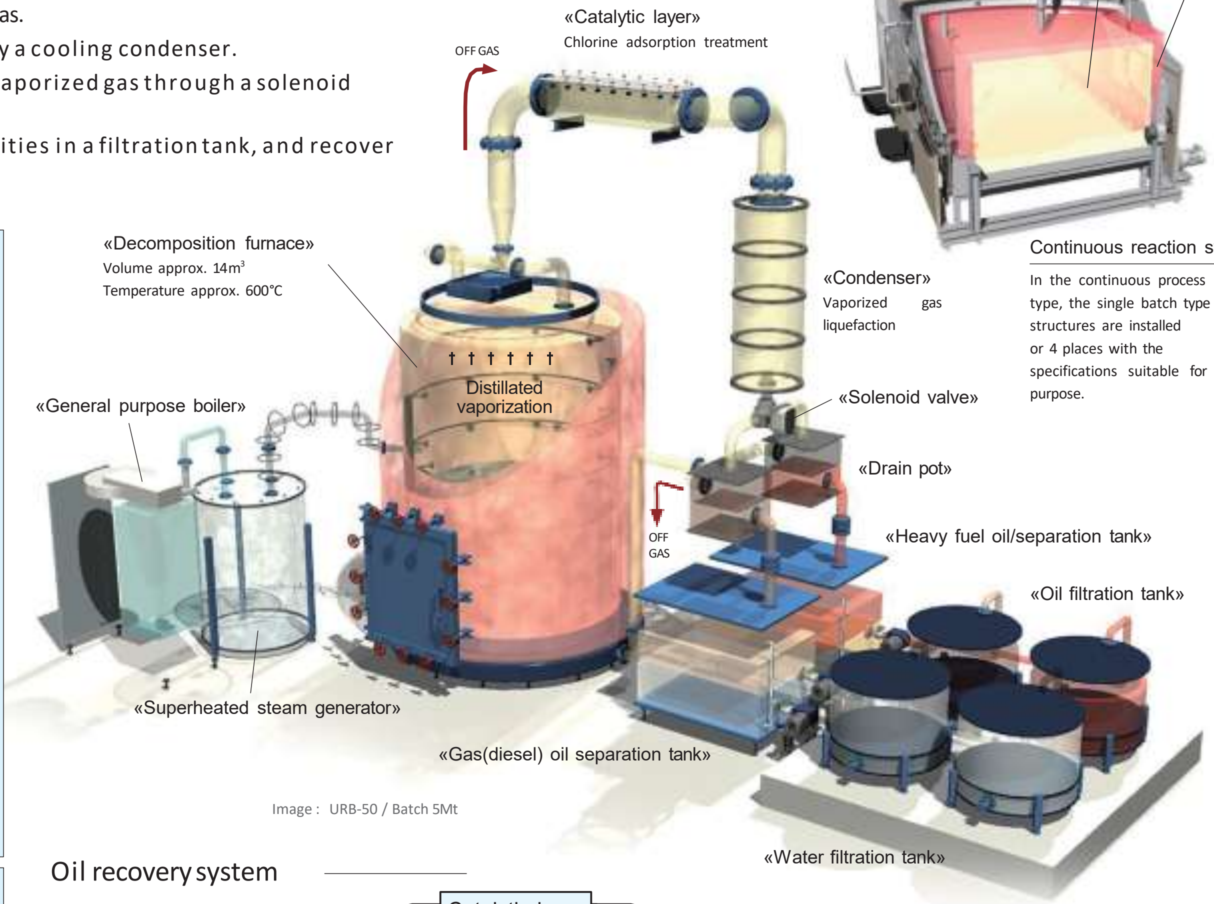
Conventional incinerator / carbonizing furnace



■ Heating power of superheated steam

Water becomes steam when it reaches 100°C. At this time, the steam tempera- ture is 100°C.
Through further rubbing the molecules at high speed, the temperature of the steam exceeds 100°C, and it becomes colorless and transparent H_2O gas.
This gas has the characteristics of spread heat transfer, convective heat trans- fer, and condensation heat transfer. It holds the combined heat transfer power of oxygen, convection, radiation, condensation with accurate controllability.



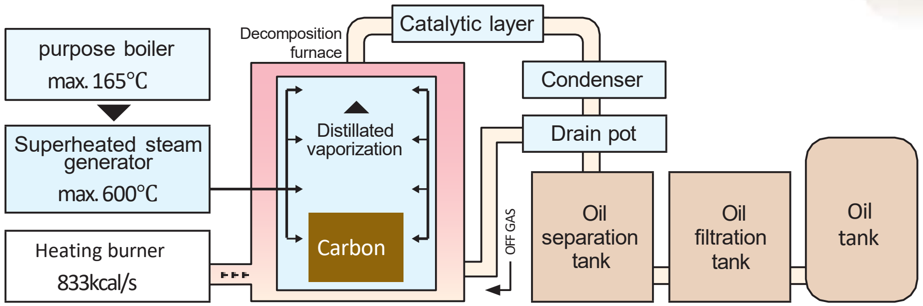


Continuous reaction system

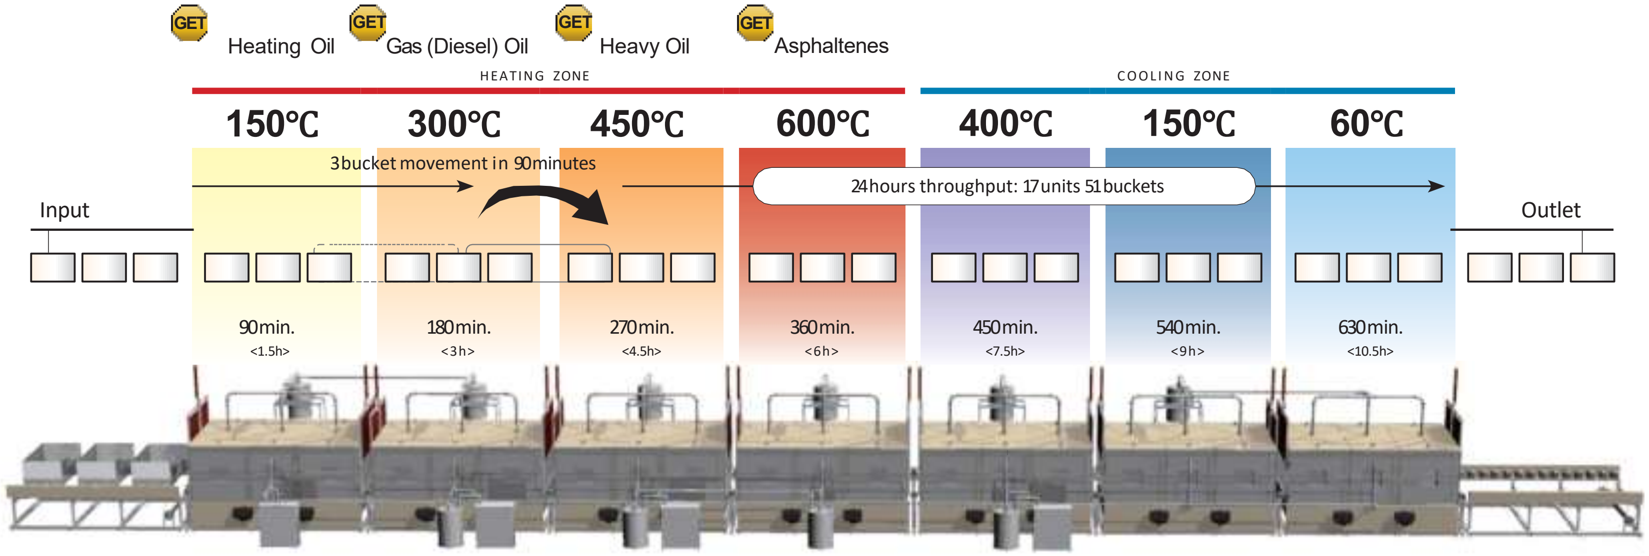
In the continuous process type, the single batch type structures are installed at 7 or 4 places with the specifications suitable for the purpose.

Image : URB-50 / Batch 5Mt

Oil recovery system



overheat temperature of 7-continuous process unit



New generation Resource Recovery Facility

Continuous unit system

The continuous unit process has a temperature setting for each unit. The state of the extracted vaporized gas is stable by a constant temperature setting and able to create the environment for chlorine removal, liquefaction, and cooling process without time lag and loss. It is possible to carry out the work efficiently and accurately for the work before loading and the residuals processing such as carbides and metals.

New generation Resource Recovery Facility

About inputs and recovery fuel oil

URBAN RIG is a new generation resource recycling facility that can easily recover fuel oil from waste by thermal decomposition without pre-treatment and sorting. The carbonization reduction rate of waste is up to 5%, and the fuel oil recovery from resin-based waste is about 85% of the input content.

Amount of input "one day"

200Mt

Specific gravity :0.6

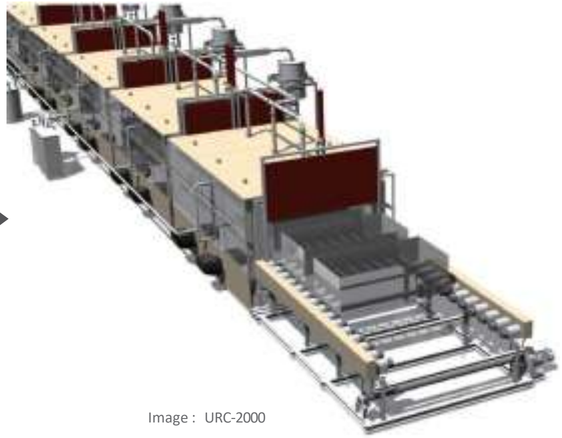

Image : URC-2000

Resin content rate 90%

Sample input Resin content rate of 90%(unwashed) Poly-based and PVC-based vinyl mixed other, bound iron wire, adherence, etc.

※ PVC: 10% Poly: 80% etc

Details of waste per day that can be recovered by URC-2000

	Ingredient	Component ratio	Daily Recovery name quantity	Resource recycling method
Liquefied Oil	Gas (Diesel) Oil	61.2%	62,424ℓ (62.424ton)	Reuse in the processing machine = 1500ℓ Fuel for sale = 60,924ℓ Electricity sales = 60,924ℓ
Liquefied Oil	Heating Oil	7.65%	7,803ℓ (7.803ton)	Sale as heating fuel
Liquefied Oil	Heavy Oil	7.65%	7,803ℓ (7.803ton)	Sale as heating fuel
Liquefied Oil	Recovery Loss	11.5%	11,730ℓ (11.73ton)	Mainly discharged as flue gas; a very small amount will be carbide.
	Carbide	5%	$5.1m^3$ (5.1ton)	Produce high-calorie powder coal mixed with heavy oil
	water	5%	5,100ℓ (5.1ton)	Reuse in steam boiler. Residual water is utilized as in house water or drain to sewage.
	Metals and glasses etc.	2%	$2.04m^3$ (2.04ton)	Metals and glasses = Recycled resources Debris sand, stone = Reclamation at site

If the component ratio of the input waste is the same, the same recovery ratio can be achievable with any model

分析報告書

TS优测 检测报告 TEST REPORT

About Recycled Fuel

The recovery fuel oil component varies depending on the content of the resin waste to feed. To recover the appropriate component value of fuel oil, it is necessary to control system settings such as overheat temperature and time.

Field report

At a processing plant in China (Shandong Qufu), the recovered diesel oil is used as forklift fuel.

<Drum batch type 5tons>

New generation Resource Recovery Facility

About Waste

Not disposable Wastes can treat with zero fuel consumption.

The right pictures are for reference only. Waste treatment laws and regulation are differ depending on the country or region. Also, the recovery rate and the recovery material component may change depending on the waste. Please contact us for a suitable system.

Request for preliminary analysis of waste

OneWorld analyzes carbonization volume reduction and analytic survey of fuel oil recovery rate and other recovery items other than fuel oil (aromatics, etc.) for the waste trouble you with a reasonable fee. Also, based on these analyses, we can propose a basic planning system based on the processing volume required

CONTACT US

peterong@petercorpgroup.com

Please contact us by specifying the waste you want to analyze together with an overview of your company. We will send an analysis survey request form. We will inform you of the analysis costs as well.

Urban Rig Vs Incinerator (WTE)

	Incinerator (WTE)	Urban Rig
Total Capital Expenditure	Very high Price	Lower price than incinerator
Annual Operation Expenditure	Very high operation expenditure	Lower operation expenditure
Output from the garbage for resales	No	Yes (recycled metals, heavy oil, solid fuel carbide etc). Generate high income for the operator.
Carbon Credit scheme	Penalty	Profit
CO2 generation per annum	Very high	Very minimum
Water usage	926 liters/ ton of garbage	60 liters/ ton of garbage
Air Pollution	YES	NO
Dioxin generation	YES	NO
Processing high salt content sea garbage	NO	YES

CONTENTS

JARDIN

1. Company Overview

Corporate Name	**Hardin Co., Ltd**	Date of Establishment	October 15, 2000
Representative Name	Kim Nam-Ryeong	Business Registration No.	304-81-10210
Industry	Service Industry	Business Type	Interim Disposal of Industrial Waste
Location	64, Natoro 73-gil, Jecheon-si, Chungcheongbuk-do		
Phone No.	043-644-4110	Fax No.	043-648-4110
Business Scale	**Capital Stock** 100 Million Won	Sales (24')	3,573 Million Won
	Total Assets 4,296 Million Won	No. of Employees	14 Employees

2. Company History

~2012

- 2000. 10. Establisment of company.
- 2011. 06. Acquisition of company and establishment of Nature Environment Co., Ltd.
- 2011. 10. Installation of 1 shredder (200HP).
- 2012. 03. Installation of 1 shredder (300HP) and 1 crusher (300HP).
- 2012. 09. Waste collection and transportation business added.

2013~ 2020

- 2013. 03. Change of permit and use of facilities related to resource circulation.
- 2013. 05. 1 more shredder (300HP) added.
- 2014. 11. ISO 9001, ISO 14001 certification.
- 2015. 12. Addition of 1 shredder (450HP).
- 2019. 10. Addition of 1 crusher (450HP).

2021~

- 2024. 02. Extension of 3rd plant (735 m^2).
- 2024. 02. Expansion of recycling capacity (84 tons/day -> 130 tons/day) and allowable storage capacity (2,404 tons -> 3,727 tons).
- 2025. 02. Change of company name (Hardin Co., Ltd.) and representative person.

4. Differentiation

01 Reasonable Processing Unit Price

Industry-leading waste disposal unit prices with minimal margins

02 Waste Collection and Transportation Support

Real-time collection and transportation support through collaboration with waste collection carriers

03 Reporting and Registration Procedures Support

Support for preparing and reporting documents related to proper registration of emitters

04 Environmentally Friendly Processing

Installation of dust collection, deodorization, noise removal systems, and environmentally friendly disposal through waste recycling

Attention : Mr. Peter Ong, Managing Director

Subject : Letter of Intent to Purchase Urban Rig Pyrolysis Equipment, Model URC1000

Dear Mr. Peter Ong,

This Letter of Intent ("LOI") serves as a formal expression by Harding Co., Ltd. ("Buyer") of its intention to purchase two (2) units of Urban Rig Pyrolysis Equipment, Model URC1000 ("Equipment"), from Petercorp International Pte Ltd ("Seller"), subject to the following terms and conditions.

---

1. Equipment and Specifications

- **Model** : URC1000 (99 tons daily capacity)
- **Quantity** : Two (2) units
- **Specifications** : As per Seller's technical specifications in Appendix A

2. Purchase Price and Payment Terms

- **Total Purchase Price** : USD 60,000,000 (FOB Japan, exclusive of applicable taxes, duties, and freight

- Payment Schedule:
  - 50% upon execution of the Purchase Order
  - 40% prior to shipment
  - 10% upon completion of on-site installation and commissioning

3. Delivery and Installation

- The Buyer shall bear the total transportation cost of USD 400,000 for shipment, which covers approximately fifty (50) 40ft containers from Japan to a Korean port (excluding Korean import duties).
- The Buyer shall pay an additional USD 400,000 for the participation of engineering consultants dispatched by the Seller from Japan to supervise the installation work.

4. Warranty

The Seller warrants that the Equipment shall:

- Fully comply with the agreed specifications; and
- Be free from defects in material and workmanship for twelve (12) months from the date of completion of installation and commissioning.

5. Non-Binding Effect

This LOI shall not be legally binding until and unless the Parties enter into a formal Purchase Order Agreement.

6. Governing Law

This LOI shall be governed by and construed in accordance with the laws of the Republic of Korea.

Accepted and Agreed
