
Annex 12 — Scenario Economics: Industrial Residues (France)

Purpose: Full financial model for a URC-2000 deployment processing industrial and commercial waste (DAE). Combines the feedstock profile from Annex 7, pricing from Annex 3, equipment configuration from Annex 9, and country-level parameters from Annex 4A.

Date: March 2026 **Status:** PLACEHOLDER — to be completed when scenario modelling phase begins.

Scope

This annex will contain:

1. **Feedstock parameters** — DAE composition (Annex 7), variable plastic content by industrial sector
 2. **Revenue projections** — Gate fees (industrial rates), oil, biochar, metals, carbon credits
 3. **CAPEX** — Per Annex 9 §9.5.1 industrial configuration (~€64.9M)
 4. **OPEX** — Adapted to industrial waste characteristics
 5. **Energy balance** — Variable by feedstock composition
 6. **P&L, cash flow, and payback** — 15-year projection
 7. **Sensitivity analysis**
 8. **Industrial-specific considerations** — Contract structures with waste generators, feedstock variability, multi-source blending
